

## RECORD OF COMMUNICATION

March 24, 2017

Mr. Tony Martinez, Facility Manager, GOTECH Terminal, Gravity Midstream

361-289-5500

On March 24, 2017, I, David Eppler, at about 11:20 am, placed a telephone call to 361-289-5500, the GOTECH Corpus Christi Terminal for Gravity Midstream, and talked to Mr. Tony Martinez, Facility Manager for the GOTECH Terminal. I explained who I was, and inquired of him whether or not the facility experienced any discoloration or odor or evidence of chemistry in their drinking water from the chemicals released from the Ergon facility, which is upstream of GOTECH, which resulted in the shutdown of the Corpus Christi drinking water system. Tony stated that the facility did experience discoloration and odor as a result of Ergon's release, and that they took photos of samples of the contaminated water. He stated that their laboratory requires pure water for their processes, and that they were affected by the release. He also stated that some time after their facility was affected, TCEQ met with them and investigated how GOTECH was affected. I gave Tony my e-mail address and he promised to get back with me on all the information they collected and supplied to TCEQ.
